# Common biases in current generation of CGCMs

- ***Errors in the precipitation distribution with***
  - Second spurious Inter-Tropical Convergence Zone (ITCZ) south of the equator in the eastern Pacific
  - Out of phase diurnal cycle
- ***Tropical Cyclone Activity with***
  - Unrealistic frequency
  - Weak intensity
- ***Misrepresentation of the Madden Julian Oscillation (MJO)***
  - Underestimation of the strength and coherence of convection and wind variability
  - Incomplete life cycle
- ***Misrepresentation of the Summer Indian Monsoon***
  - Deficit or excessive precipitation distribution over the Indo-Pacific Warm Pool
  - Underestimate subseasonal propagating variance
- ***ENSO with***
  - Unrealistic amplitude and regular occurrence
  - Period that is too long or too short
