

Coupled - recap

- By July 1 2017, deliver:
 - 2500+ years of quality low-res water cycle simulations,
 - 100-200+ years of quality high-res water cycle simulations.
- Time is of the essence
 - may need to prioritize short term over long term activities.
- We are now in **beta** phase
 - coupled model need to be heavily exercised and scrutinized.
- Start running **beta0** next week
 - alpha9 + CIME5 (= alpha10) + component bug fixes.
- Possible challenges
 - excessive drift (cooling), sea-ice formation,
 - too strong AIE,
 - many unknowns...

Coupled - recap

- Need close and frequent interactions with Workflow
 - the more useful tools we can get in place for v1, the better we will be.
- **Be prepared for JIRA!**
 - granularity TBD
